PROFESSIONAL SUMMARY

Full Stack Web Developer with hands-on experience building AI-integrated applications using Next.js, TypeScript, and Python. Proven track record in automating workflows, integrating modern LLM APIs, and leveraging autonomous agentic coding tools to rapidly architect scalable backends and production-grade web platforms.

EDUCATION

Rizal Technological University
Bachelor of Science in Computer Engineering

Aug 2022 – July 2026
Maybunga, Pasig

EXPERIENCE

Q Asia Magazine Inc.
Information Technology Intern

Feb 2026 – April 2026
Mandaluyong City

- Developed an automated email outreach application using Python, CustomTkinter, and FastAPI, streamlining bulk client campaigns and saving 4 hours of manual work per session.
- Programmed dynamic data parsing engines to handle Excel and CSV recipient databases, automatically generating tailored HTML invitation templates for up to 150 businesses at a time.
- Integrated security controls and batch throttling to prevent spam flags, alongside an interactive browser-based previewer, successfully increasing overall outreach efficiency by 60%.

TECHNICAL PROJECTS

AniVerse - Anime Discovery and Streaming Platform

- Built and deployed a full-stack anime discovery web app using Next.js, TypeScript, FastAPI (Python), and MongoDB on Vercel.
- Aggregated metadata for over 27,000+ anime entries by integrating AniList (GraphQL) and Jikan/MAL APIs, normalising disjointed data sources into a unified, indexed schema to reduce search latency.
- Enhanced backend stability by isolating scraping procedures into asynchronous subprocess jobs and implementing custom caching and merge logic to handle external API rate limits seamlessly.

Vitae - AI Resume Builder

- Developed a production-grade resume builder using Next.js (App Router), TypeScript, and Prisma ORM, implementing Supabase authentication and real-time auto-save versioning on a PostgreSQL database
- Shipped 4 distinct AI features (rewrite, ATS scoring, job-match, cover letters) using a dual-provider architecture (Groq + OpenRouter) to ensure 100% uptime and reliability during LLM API outages.
- Secured application endpoints by engineering Upstash token-bucket rate limiting, input sanitization pipelines, and strict authorization guardrails against prompt-injection vulnerabilities.

GhostProject - ML Flood Infrastructure Planning Platform

- Developed a responsive full-stack web application using Next.js (App Router) and TypeScript, leveraging React Server Components (RSC) to optimize data fetching for downstream ML model predictions.
- Built an interactive geospatial dashboard utilizing React-Leaflet and Tailwind CSS to seamlessly cluster, color-code, and render 9,855 nationwide data points flagged by an XGBoost risk classification engine.
- Integrated asynchronous REST APIs using FastAPI and Python 3.11 to link the user interface with an in-memory DuckDB database, achieving sub-second model inference responses for predictive budget queries.

TECHNICAL SKILLS

Frontend Web Development: TypeScript, JavaScript, Next.js (App Router), React, Tailwind CSS, HTML5/CSS3,

Backend & APIs: Python, FastAPI, Node.js, Express.js, Prisma ORM, RESTful APIs, GraphQL, RBAC

Databases: PostgreSQL, MongoDB, Supabase, DuckDB, SQLite, MySQL

Tools & Deployment: Git/GitHub, Vercel, Docker, GitHub Actions, VS Code, Postman
